

STOP WASTING MONEY ON PREMATURELY DRYING INK

It's often necessary during the production process to mark sheet metal with batch numbers, arrows, fold sequences and instructions for secondary operations. The Pen, from Wilson Tool International, allows fabricators to mark materials quickly and easily.

Unlike other sheet metal marking systems, The Pen is equipped with an automatic airtight mechanism, eliminating the need to replace a lid after each use.

The Pen Features

- Longer ink life thanks to the airtight lid mechanism
- Automatic lid means the tool is always ready to go
- Quick change between ink colors
- Re-fillable
- The Pen comes as a kit in a protective case, with a digital user guide
- Available for thick turret (A-station) and TRUMPF-style machines
- Available in four standard colors: Blue, Black, Red and Green — with six additional colors available upon request

Use The Pen to Mark Materials with:

- Job numbers and batch numbers
- Bend lines, arrows and fold sequences
- Instructions for other secondary operations

TRUMPF is a trademark of TRUMPF GmbH + Co. KG.
