

PRESS BRAKE TOOLING MADE EASY

Stop juggling suppliers. Wilson Tool International is your one-stop-shop for the industry's most comprehensive range of press brake tooling. From simple bends to complex geometries, our tailored solutions and high-efficiency clamping reduce production time and keep your operation at peak performance.

Precision Tooling Universal Features

- Precision ground ($\pm .0004"$)
- Sectionalized
- Nitrex® and/or laser heat treated for longer life
- "Ear pieces" for box bending and return flanges
- Laser marked with detail for easy tool identification

American

- Staged height for all angles
- Push-button loading for quick setup
- Hydraulic and electric holders for quick loading

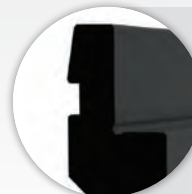

WT-Style

- Compatible with Wila and Trumpf
- Push-button loading for quick setup
- Hydraulic and electric holders for quick loading

European

- Compatible with Amada®
- Shorter height, smaller, lighter punches for easy handling
- Staged tooling available
- Holders for quick loading

Fixed Height

- Compatible with Amada® AFH tooling profiles
- Shorter height, smaller, lighter punches for easy handling
- Holders for quick loading

LVD-Style

- Compatible with LVD Press Brakes
- Push-button loading for quick setup
- Hydraulic and electric holders for quick loading
- Laser hardened tips

Bystronic

- Compatible with Bystronic RF-A tooling
- Punches available in 175mm and 200mm heights

Automatic Tool Change

- ATC for Amada® Brakes
- ATC for MC Machinery Press Brakes

Amada® is a registered trademark of Amada Co., Ltd. and is used by Amada America, Inc., Amada Capital Corporation and Amada Co., Ltd.

Conventional Tooling Features

- Planer Machined ($\pm .002"$)
- Commonly sold in longer, solid lengths of 10-14 ft.
- Standard Hardness: 28-32 HRC
- Optional induction hardening and Nitrex® heat treatment available
- Economical alternative to precision tooling
- Availability includes American, WT, LVD, Bystronic and European

Custom Specials for All Tooling Styles

Driven by a "never say no" attitude, our Tooling Technicians specialize in engineering custom solutions for any tooling style. We transform your toughest application challenges into streamlined, repeatable results. Bring us your most difficult problem today and we'll work with you to find an effective solution.

Press Brake Specials

PRODUCT OVERVIEW FOR BENDING

Clamping Systems for Faster Tool Changes

Clamping solutions can be added to virtually any press brake to speed tool changeovers and reduce downtime. Ask us about our revolutionary **eClamp™** powered by standard shop electricity, our hydraulically powered **Express Rail® System** with wireless pendant control, or the simple lever action of our **Express Punch Clamps**. Need to control deflection? The **Express Crowning® System** offers precise and consistent bending of longer parts. No matter what your needs, Wilson Tool has a clamping system for you.

Bending Accessories

Wilson Tool offers premium press brake parts and accessories to optimize your workflow. From measurement tools and storage options to mark-free bending solutions, we provide a full spectrum of tools to support your operation.

Press Brake Dies

Wilson Tool offers a versatile range of press brake dies designed to optimize efficiency, including cost-effective **4-Way Dies** that provide multiple V-openings in a single block and **V-Series Black (VSB) Dies** that use rotating inserts to eliminate material marking. For heavy-duty applications, **Adjustable Dies** allow for variable V-openings capable of handling up to 400 tons per foot, while **Quick Change 2V Dies** are engineered to minimize downtime by streamlining the tool replacement process. Together, these solutions provide the precision and durability needed to handle everything from delicate finishes and short flanges to high-tonnage industrial bends.
