TOOLING STYLES FOR BENDING

European Style Tooling

- Precision ground
- Shorter height, smaller, lighter punches for easy handling
- Sectionalised
- Staged tooling available
- Holders for quick loading
- Nitrex® heat treated dies for long life
- “Ear pieces” for box bending and return flanges
- Laser marked with detail for easy tool identification
- Custom Specials Available

Fixed Height Tooling

- Precision ground
- Exact match to Amada® AFH tooling profiles
- Shorter height, smaller, lighter punches for easy handling
- Sectionalised
- Nitrex® heat treated dies for long life
- “Ear pieces” for box bending and return flanges
- Laser marked with detail for easy tool identification
- Custom Specials Available

Trumpf® Style Tooling

- Precision ground
- Sectionalised
- Push-button loading for quick setup, less than 13.5kg
- Nitrex® heat treated dies for long life
- “Ear pieces” for box bending and return flanges
- Laser marked with detail for easy tool identification
- Custom Specials Available

Wila® Style Tooling

- Precision ground
- Sectionalised
- Push-button loading for quick setup, less than 13.5kg
- Nitrex® heat treated dies for long life
- “Ear pieces” for box bending and return flanges
- Laser marked with detail for easy tool identification
- Custom Specials Available

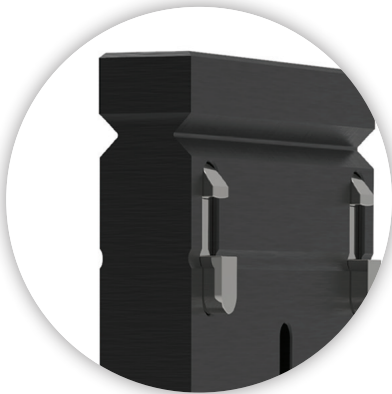

LVD-Style Tooling

- Precision ground
- Compatible with LVD Press Brakes
- Sectionalised
- Push-button loading for quick setup, less than 13.5kg
- Induction Hardened Dies
- “Ear pieces” for box bending and return flanges
- Laser marked with detail for easy tool identification
- Custom Specials Available

Bystronic™ Style Tooling

- Precision ground
- Match Bystronic profiles
- Induction Hardened Dies
- Laser marked with detail for easy tool identification
- Custom Specials Available

ATC Tooling for Amada® Brakes

- Precision ground
- Nitrex® heat treated dies for long life
- “Ear pieces” for box bending and return flanges
- Laser marked with detail for easy tool identification
- Custom Specials Available

CLAMPING AND ACCESSORIES FOR BENDING

Clamping for Faster Tool Changes

Clamping solutions for upper and lower beams can be added to virtually any press brake to speed tool changeovers and reduce downtime. Whether you're looking for electric clamping, crowning, simple lever activation, hydraulic solutions or common manual holders and extensions, Wilson Tool has a clamping system to meet your needs.

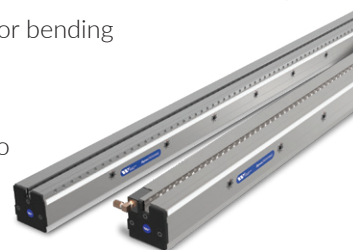

eClamp™ offers unmatched efficiency, versatility and ease of use, and is powered by standard shop electricity. Say goodbye to downtime with quick and easy clamp replacements and revolutionise your press brake operation.

Express Rail® 2000 Clamping System is hydraulically powered, using a wireless pendant control that clamps and seats tooling in seconds.

Express Crowning® System is the precise and consistent option for bending longer parts while controlling crowning.

Express Punch Clamps instantly lock European-Style punches into place with the pull of the lever. Available for virtually any make or model of press brake.

Accessories for Bending

Wilson Tool provides high-quality machine parts and accessories for your press brake. From measurement tools to storage solutions to options for eliminating sheet marking, we offer a full spectrum of extras to support your bending operation.

Mark-Free Solutions

Wilson Tool provides many options for reducing or eliminating sheet marking. Urethane dies and pads, and urethane or fabric drapes are common choices to help prevent sheet marking.

Tool Storage Cabinets

Keep your press brake tooling safe, secure and easily accessible with horizontal or vertical storage cabinets.
