

# ELIMINATE THE “CANOE EFFECT” WITH THE EXPRESS CROWNING® SYSTEM

## Precision Bending, Every Time

Bending long parts on a press brake can often lead to unwanted deflection, resulting in inaccurate and costly parts. Wilson Tool International's Express Crowning® system is the solution you've been waiting for.

## Key Benefits of Express Crowning®

- **Precise Control:** Achieve accurate bending results with precise adjustments:
  - Crowning: adjust the beam up to 3.5mm (.137")
  - Micro: every 200mm (7.87") on the beam for fine-tuning up to 0.76mm (.030")
- **Secure Die Holding:** Ensure optimal performance with our secure die-holding mechanisms via set screws every inch or with hydraulic power.
- **Durable Construction:** Built to last with a silver steel body hardened to 28-32 HRC.
- **Efficient Operation:** Quickly and easily adjust the crowning with manual or CNC control.

## Don't Let Deflection Derail Your Production

Upgrade your press brake with Express Crowning® and experience the difference.
