

Now use your punching tools on your press brake

This solution makes it possible to use new or existing punch press tooling in the press brake to produce forms that would otherwise need to be made on a punch press. Brake Partner offers Fabricators the capability to perform punch press operations in-house, even when no punching machine is available, and/or, to further expand the capabilities of their existing press brakes.

Brake Partner is especially helpful for fabricators who have migrated away from punch presses to laser cutting machines, or those whose punch presses are running at full capacity. The solution allows shops to greatly expand the capabilities of their existing press brakes, thereby saving on the cost of a new machine, or outsourcing punching applications.

The Brake Partner incorporates an alignment system that allows the top and bottom units to be aligned quickly and precisely with little more than an Allen wrench.

The design also incorporates a quick change, inter-changeable tang system, so the tool can be used on various styles of Press Brake.

This innovative solution can help lower costs and reduce lead times due to the streamlining of equipment and machine flexibility it offers fabricators.

The Brake Partner is available in a variety of options to suit most Press Brakes and tool styles.

HOW THE BRAKE PARTNER CAN HELP...

Want forms to go on both sides of your part, but you cannot afford the form to be damaged during the punching operation?

Then do it on your press brake during the folding operations.

Only have lasers or waterjet, and need some louvres or extrusions in your parts?

Use the brake partner to add these forms during the folding operations.

Have you run out of tool stations on your punch press?

Then add them to the Press Brake operations with the addition of the Brake Partner.

You want a form that's maybe too high for your punch press?

Then use the Brake Partner to go beyond these limitations.

PART NO.	DESCRIPTION
55410	Wilson Brake Partner Assembly, WT Style
55413	Wilson Brake Partner Assembly, EURO Style
55418	Wilson Brake Partner Assembly, Bystronic Style

NOTE: OTHER TANG CONFIGURATIONS ARE AVAILABLE UPON REQUEST.
