

UP YOUR TURRET CAPACITY

Add the functionality of seven more punches to your turret press by using the MT7A multi-tool in your auto index station. The MT7A from Wilson Tool International is like another little turret inside your punch press. It incorporates seven 1/2" (A-station) tools of any style — Basix, HP or HPX — into one 4-1/2" auto index station. This solution is an ideal way to increase the volume of lower-capacity turret presses without buying a new machine.

Reduce Time and Costs

By consolidating up to 7 punches into a single tool, the MT7A helps fabricators reduce the time and hassle of multiple setups. The drop-in style allows for quick and easy punch loading and unloading. This savings results in less cost over time.

Multiple Station Options

The MT7A assembly lets fabricators swap out any seven new or existing 1/2" punches and dies from the Basix, HP or HPX line of thick turret punch press tooling. MT7A dies allow for the 1/2" station dies to be keyed at 0-45° or 90° angles and the center station is 100% indexable.

Long Lasting Durability and Performance

Like all Wilson Tool punching solutions, the MT7A is engineered to last. Using hardened tool steel and precision grinding for longer life and greater reliability, MT7A results in fewer alignment problems and less downtime than competing options.

From a Large Family of Multi-Tool Options

The MT7A is just one of the many multi-tool options for the thick turret punch press offered by Wilson Tool. Explore [wilsontool.com/multitools](https://www.wilsontool.com/multitools) to learn how multi-tool options can increase your turret capacity by 3, 8, 20 or even 30 additional tools.
