

THE BEST OF BOTH WORLDS

Here is a simple, affordable and effective system that can expand the capabilities of your press brakes, help streamline operations and eliminate the need for outsourcing or purchasing new equipment. Brake Partner® from Wilson Tool International lets shops use new or existing punch press tooling to make forms in the press brake.

The Brake Partner, manufactured to fit any press brake, features a pressure-pad system which provides blank-holding and stripping. It can be used with or without guide posts, depending on the application, and can be made to accept Thick Turret tooling or Trumpf-style tooling.

Cost-Saving and Time-Saving Benefits

- Perform all operations in the press brake to reduce part handling
- Holders are stocked and ready to ship
- Use existing punch tooling
- Manufacturing lead times for punching specials are a fraction of the time needed for press brake specials
- Reduce outsourcing of punching applications
- Streamline equipment usage and create more flexibility in your shop

Signs You Might Need a Brake Partner

- Did you run out of capacity on your punch press?
- Do you have a form that's too large for your largest punch press station?
- Need more tonnage than your punch press can deliver?
- Do you need a higher form than your turret's feed clearance will permit?
- Do you need to form a laser cut part?

If any of the above scenarios can be found in your shop, Brake Partner® is for you!
