

QUICK AND EASY CLAMPING

The Express Clamping System® from Wilson Tool International offers the ease and speed of manual lever activation to quickly clamp and seat European style punches.

Adding a clamping system to your press brake is like adding new life to your machine — it adds updated functionality and refreshes the bending surface. Clamps are a great way to dramatically reduce setup and changeover time.

System Features

- Simple manual lever activation
- Simultaneous front and back clamping means tools can be loaded front and back at the same time
- Height compatible with OEM punch holders
- Sectionalized style allows you to gap the holders for box bending and other complicated setups or push together to create a solid upper beam
- Tool-free attachment and removal of clamp plates
- No more loose punches – the serrated fingers on each clamp plate securely clamps small sections
- Available in multiple mounting styles (American, Z1, Z2, WT)
- Retrofit available for use with existing Express Clamps

Add Express Clamps to your press brake wherever you need more efficiency. Holders are height compatible with OEM holders and can be placed in the middle of the press brake.

Space holders in press brake with a traditional gap or interlock them to make a solid upper beam.

In addition to the Express Clamping System®, Wilson Tool offers many other clamping options. To learn more, visit wilsontool.com/clamping or scan the QR code.

EXPRESS CLAMPS

Available Mounting Styles

Handles are easily removed on all styles to reduce interference.

AMERICAN PRESS BRAKE W/WEDGE
