

THE RIGHT TOOLS, RIGHT WHERE YOU NEED THEM

Safe and efficient tool access is key to increasing performance. These cabinets are designed to do just that.

Ergonomic Design Ensures Operator Safety

- Vertical cabinet drawers eliminate the need to lean into drawers, or bend at the waist, to access tooling.
- Tooling is easily accessible from either side.

High-Capacity Drawers Open Easily

- Three, four, five or six drawer configurations
- Rolling casters help drawers open smoothly
- Drawers contain 3 or 4 trays, each holding up to 265 lbs (120kg) for ample tool storage.

Flexible Storage Capacity for Efficient Setups

- Vertically adjustable trays maximize space for the height of tooling
- Adjustable tray inserts accommodate up to two rows of various tooling profiles. Removable center channel for larger tooling.

Secure Storage Maintains Tool Condition

- Drawer trays secure punches in tip-up position to help maintain bending accuracy and ideal tool life.
- Enclosed storage helps keep airborne dust and grime away.

Smart Drawer Details Add Functionality

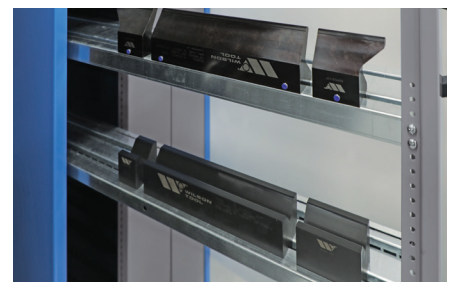

- Drawers have a keyed lock for security
- A shallow top tray holds measurement devices, hand tools, etc.

Narrow Cabinet Size Makes for Convenient Placement

- A small footprint minimizes operator movement during setup by allowing tooling to be stored close to the press brake.

Top Tray for General Storage

Tooling Loaded in Cabinet
